

## Folder structure

Overview:

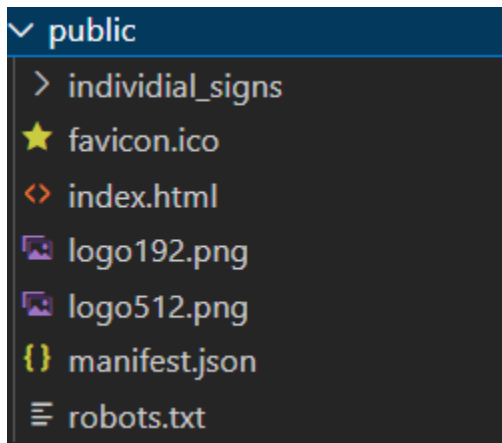

node\_modules, contains what was added with npm install commands.

public, contains publicly available info, such as the index, and the images.

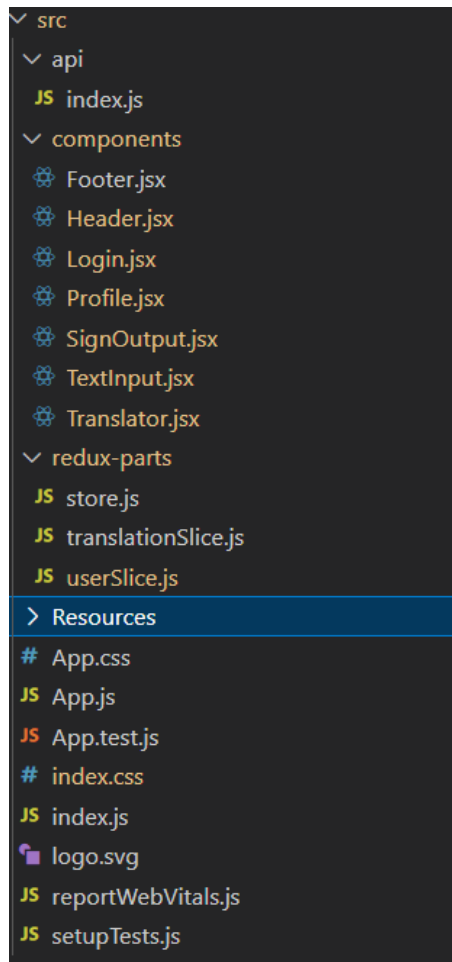

src, contains my components and other react logic.

Public:

individual\_signs contains the handsigns which we were supplied.

SRC:

api contains some logic for my api, mainly grabbing the apikey from my .env, and a createHeaders function.

Components contain my react components.

Redux-parts contains the slices and my store.

and resources contains local resources such as the logo and the fonts although I end up grabbing the latter directly from google.
